

RADIOGRAPHY SEMINAR IV
POSITIONING IV
RAD 108

Instructor: Program Faculty
Hours: T, 8:30-11:15
Text: "Textbook of Radiographic Positioning", Kenneth Bontrager
Prerequisite: RAD 106 and RAD 107
Semester: Fall semester of the second year

COURSE DESCRIPTION: This course is a continuation of Positioning III. Positioning and relative anatomy of the skull, the sinuses, and facial bones will be investigated.

COURSE OBJECTIVES:

Upon completion of this course, the student will:

- Utilize the knowledge gained in positioning patients for skull, sinus, and facial bone radiography.
- Apply proper positioning techniques to produce quality radiographs.
- Further function as a member of the Radiology Department in the utilization of radiation to help make a diagnosis.

METHODS:

Lectures, tests, assigned reading, film evaluation, audiovisual, lab practice.

EVALUATION SYSTEM:

Three cumulative tests will be given worth 20% each. An oral examination/project will be assigned worth 15%. A final cumulative exam will be given worth 25%.

This course must be passed with a minimum 75% for continuation in the program.
